

Nishit Jain

+91 78059 00204 | nishitjain02419@gmail.com | Indore, M.P. | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Technical Skills

Programming: Python, SQL

Libraries: NumPy, Pandas, OpenCV, Tkinter

Web: HTML5, CSS3, FastAPI

Tools: Git, MySQL, Power BI, Jupyter, VS Code

Work Experience

Bytes And Cookies Technologies

Duration: Sep 2025 – Present

Trainee

Project: Academic Chatbot

- Built a search system using TF-IDF for analyzing 15+ legal course PDFs to build custom JSON schema, enabling 200+ students to retrieve chapter content instantly reducing query response time by 85%
- Engineered ranking algorithm using cosine similarity to return top 3 contextual results with 90% accuracy, iterated from exact matching (60%) to semantic search after analyzing student query patterns like "explain precedent" vs. "what is stare decisis"
- Built FastAPI backend with MySQL analytics tracking 200+ interactions to identify knowledge gaps, directly informing Fall 2025 curriculum adjustments by course instructors
- Optimized performance by 68% (2.5s → 0.8s) through database indexing, caching, and refactoring nested loops with 2 senior developers learning production-scale N+1 query problem resolution

Project: Sahyog – Donation Management Platform

- Designed 3-tier role-based system (beneficiaries, donors, admins) with MySQL schema mapping user workflows and access controls, processing 50+ beneficiary profiles through automated verification pipeline, reducing approval time from 5 days to 24 hours via real-time status tracking and mobile notifications
- Engineered split-donation algorithm matching beneficiary requests across 3+ donors based on cause preference, donation capacity, and location filters, increasing funding success rate by 40% compared to single-donor matching by enabling partial contributions
- Built intelligent routing logic using donor preference scoring (cause type, amount range, region) to auto-suggest optimal donor pools, reducing admin manual review time by 60% and enabling faster beneficiary-donor connections
- Implemented edge-case handling for urgent requests by adding priority flagging that bypasses normal queue, learning to balance systematic process design with real-world urgency when beneficiaries needed emergency funding

Academic Projects

Face Track – Face Recognition Attendance System | [GitHub](#)

Duration: 2 Weeks

- Built attendance automation using OpenCV's Haar Cascade + LBPH face recognizer, training on 30 images per student across varying lighting conditions to achieve 95% accuracy—added "unknown face" detection to flag unregistered attendees and prevent proxy attendance
- Designed Tkinter GUI enabling instructors to mark 70+ students in 3 minutes vs. 15 min manual roll call, with MySQL backend generating automated daily/weekly reports showing attendance trends and identifying at-risk students (<75% attendance)

Sales Insights Dashboard | [GitHub](#)

Duration: 2 Weeks

- Built Power BI dashboard analyzing 1,000+ transactions across 5 regions with drill-down capability to visualize revenue trends, regional performance, and product mix condensed from 15 initial charts to 6 KPIs after stakeholder feedback showed simpler = more actionable
- Engineered Python ETL pipeline handling null values, duplicate entries, and inconsistent date formats, reducing manual data prep by 70% created DAX measures for YoY growth and market share enabling sales team to improve quarterly forecast accuracy

Voice Assistant – ALEX | [GitHub](#)

Duration: 2 Weeks

- Developed voice-activated assistant using Speech Recognition and Pytsx3 to execute 20+ commands (web search, app launch, reminders) with 85% recognition accuracy
- Implemented context-aware responses (e.g., "play music" remembers last song) for more natural interaction

Education

RGPV, Acropolis Institute of Technology and Research, Indore, M.P.

Duration: 2021 – 2025

- B. Tech in Computer Science and Engineering
- CGPA: 8.10/10

CBSE, Lokmanya Vidya Niketan, Indore, M.P.

- Senior Secondary (10+2) | PCM | 81.6%
- High School (10th) | 75.8%

Duration: 2020 – 2021

Duration: 2018 – 2019

Achievements and Certificates

- NPTEL DBMS Certification (Elite Rank)
- Deloitte Data Analytics Virtual Job Simulation (Verified)
- Python Certification – Google Developer Group (GDG)
